

Assembly Instructions

Please read this sheet prior to assembly to familiarize yourself with the installation process.

Tools Needed:

Phillips head screwdriver or Drill
Wire Cutter pliers
Level

ariel

 nevins™

1

Mark hole locations 6" from each end and in center of each panel. Using a Drill or Phillips head screw driver, screw the **[B] threaded stud** into marked locations with **[C] Pan head screw**. Repeat at opposite end.

BARREL LOCATIONS

****Refer to alternate attachment method @ exposed joist if required.**

2

Measure and install (2) ceiling anchors at 36" on center if required. **[A] drywall anchor** provided by Nevins. For custom widths calculate the center dimension by (Panel Width - 12") assuming each support is 6" from the end

Using a Drill or Phillips head screw driver, screw the **[B] threaded stud** into ceiling anchor using **[C] Pan head screw**. Repeat for each side

****Installer to provide alternate ceiling anchor for applications other than drywall.**

3

Hand tighten **[D] Barrel** to the threaded stud at all four (4) locations.

4

Remove loop using wire cutting pliers & insert **[E] Wire Cable** into ceiling **[D] Barrel** and tighten set screws using Hex Key provided. Repeat at two (2) locations.

5

Cut **[E] Wire Cable** to appropriate length then lift Ariel Panel, and repeat step 4. Place level on the top of panel to ensure it is hung correctly

Alternate attachment method @ exposed joist

Using loop end of wire cable create slip knot over bottom chord of joist
