

Nevins Introduces the Bio Canvas

Houston, TX - January 11, 2018

Nevins is proud to bring biophilic design to life with the launch of our Bio Canvas walls.

Bio Canvas is a maintenance free way to bring the beauty and calming effects of nature into the workplace. The collection consists of three preserved natural materials: acoustic moss, sustainable poplar bark and light stone. These natural materials are held on to the wall by an easy to install, two-piece, fire-resistant frame. The patent pending frame design offers an easy snap on/off system enabling the user to interchange panel inserts with ease. Each Bio Canvas frame can be arranged to your certain specifications creating a unique work of art.

Key Features:

- Maintenance free: does not require sunlight or water
- Fire resistant frames
- Moss and bark has acoustic properties
- Moss is 100% biodegradable
- Hand harvesting technique of the moss ensures plant renewal
- Waste eliminating: Bio Canvas utilizes the discarded bark from Poplar wood used for furniture
